

SyncTeX Precision Fixture

Tex64 E2E Suite

2026

1 Overview

Scenario-driven tests keep coordinates repeatable. A clean source file produces stable forward and reverse mappings. Each line of this fixture is plain prose for line-level validation. Do not add unsupported macros in this section. We intentionally keep this text deterministic. Even short lines should still map correctly when synchronized. The sync engine should navigate to the exact source line requested. Plain sentence blocks make this check robust across engines. This section is used to catch off-by-one regressions quickly. A unique marker: OVERVIEW_MARKER_ALPHA. Another marker: OVERVIEW_MARKER_BETA.

2 Measurements

Inline math keeps line mapping stable when the formula is short. Equation content on a single line: $E = mc^2$ and $a+b = c$. A second inline formula includes indices: $x_i = y_i + z_i$. Only one math expression should be sufficient per line. Spacing and punctuation are intentionally varied for deterministic parsing. This line mentions markers: MEASUREMENTS_001 and MEASUREMENTS_002. Avoid display math here so the mapping stays easy to verify. The sentence below is the final measurements line for this section.

3 Appendix

Appendix lines add depth without introducing structural noise. This fixture file is intentionally small but sufficient for confidence. A trailing marker appears here: APPENDIX_MARKER_GAMMA. The final line should remain stable after repeated sync operations.
